

LED Controller

What is LED Controller

LED Controller is
open source project that controls
RGB LED strips using IQRF
wireless modules, IQRF Cloud
with IQRF Ethernet gateway and
Atmel 8-bit AVR microcontroller
with Arduino firmware.

Communication

Communication with IQRF Cloud is provided via IQRF Ethernet gateway.

Communication with web application is provided via [my Nette extension](#).

Applications

Application for microcontroller is written in Arduino language.

Web application is written
in PHP using the
Nette framework.
