LED Controller

What is LED Controller

LED Controller is open source project to control RGB LED strips using IQRF wireless modules, IQRF Cloud with IQRF Ethernet gateway and Atmel 8-bit AVR MCU with Arduino firmware.

Communication

Communication with IQRF Cloud is provided via IQRF Ethernet gateway.

Communication with web application is provided via my extension to Nette Framework.

Applications

Application for MCU is written
in Arduino language.

Web application is written
in PHP with using
Nette framework.
